

Wiring Accessories for a Smarter Home

Smart Box & Application

INTRODUCING CLICKsmart

From our family to yours...

Click Smart makes it easier than ever for installers to provide an upgrade to an existing wiring installation.

Smart Switches consist of a Retractive Switch Module and Switch Plate. They are available in five switch types, in multiple finishes and styles from across the Click® Wiring Accessory ranges to offer maximum choice.

The Click Smart controls make it easier to switch and dim wirelessly from preferred locations without the use of switch drops.

Join our Smart family at click-smart.com to learn more about how Click Smart can upgrade your home and make your own lifestyle smarter.

In a series of entertaining, easy to follow videos our family demonstrate how the Click Smart range can eliminate the everyday annoyances and enhance your home environment.

Control at your fingertips...

WIRELESS CONTROL VIA YOUR SMART PHONE OR TABLET

Why Click Smart

We believe in keeping essential functions in the home, for instance the ability to turn the lights 'on and off' from a switch on the wall.

However, we've designed an app which puts the functionality of your home in the palm of your hand, introducing the Click Smart Box and App.

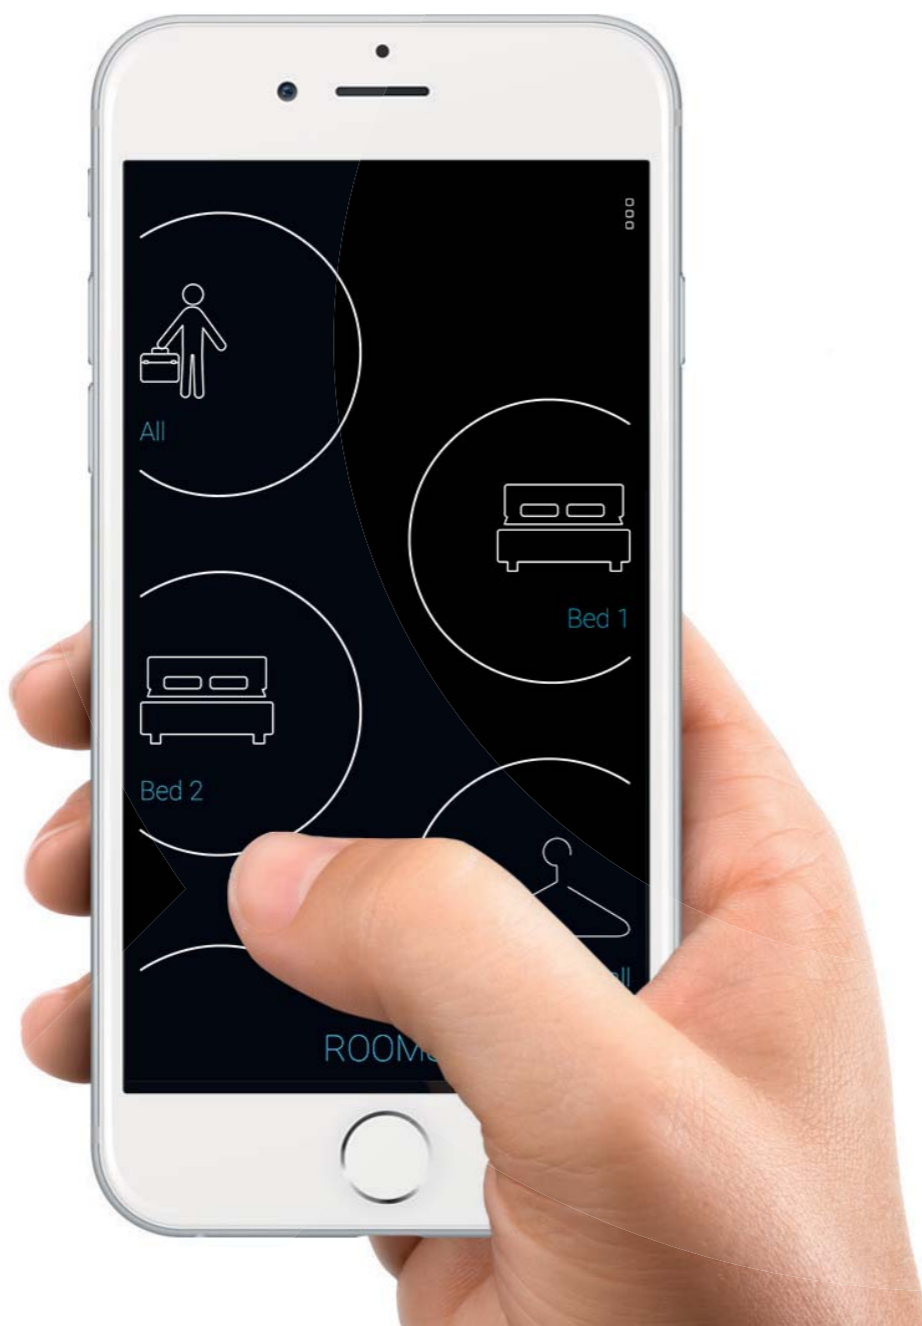

The click smart box is designed with simplicity in mind. The smart box can quite simply be dropped into new and existing Click Smart installations, all that is required is a broadband connection.

Simply plug the smart box into one of the ethernet ports located usually on the back of your broadband router, download the app and away you go!

Download the app from
the Apple App Store
or Google Play

The in app guide will guide you
through the set up process.

Group multiple receivers into a scene to help create the perfect ambience for every occasion.

Or create a schedule, timed elements can be created and activated at times to suit you. Should this be for your outside lights to come on in particular on dark evenings for added security and reassurance.

All this whilst still retaining local control.

Three products are all you need...

The system comprises of three basic components. The Smart box itself, RF receivers and a smart phone or tablet.

Whether it's a new project or adding control to an existing CLICKSMART system the Smart Box enables automation via a phone or tablet for the whole family/team.

SMART BOX

The Smart Box itself, connected to the wireless router and a power socket outlet.

RECEIVERS

Receivers are available in three categories - switching receivers, dimming receivers and shutter receivers.

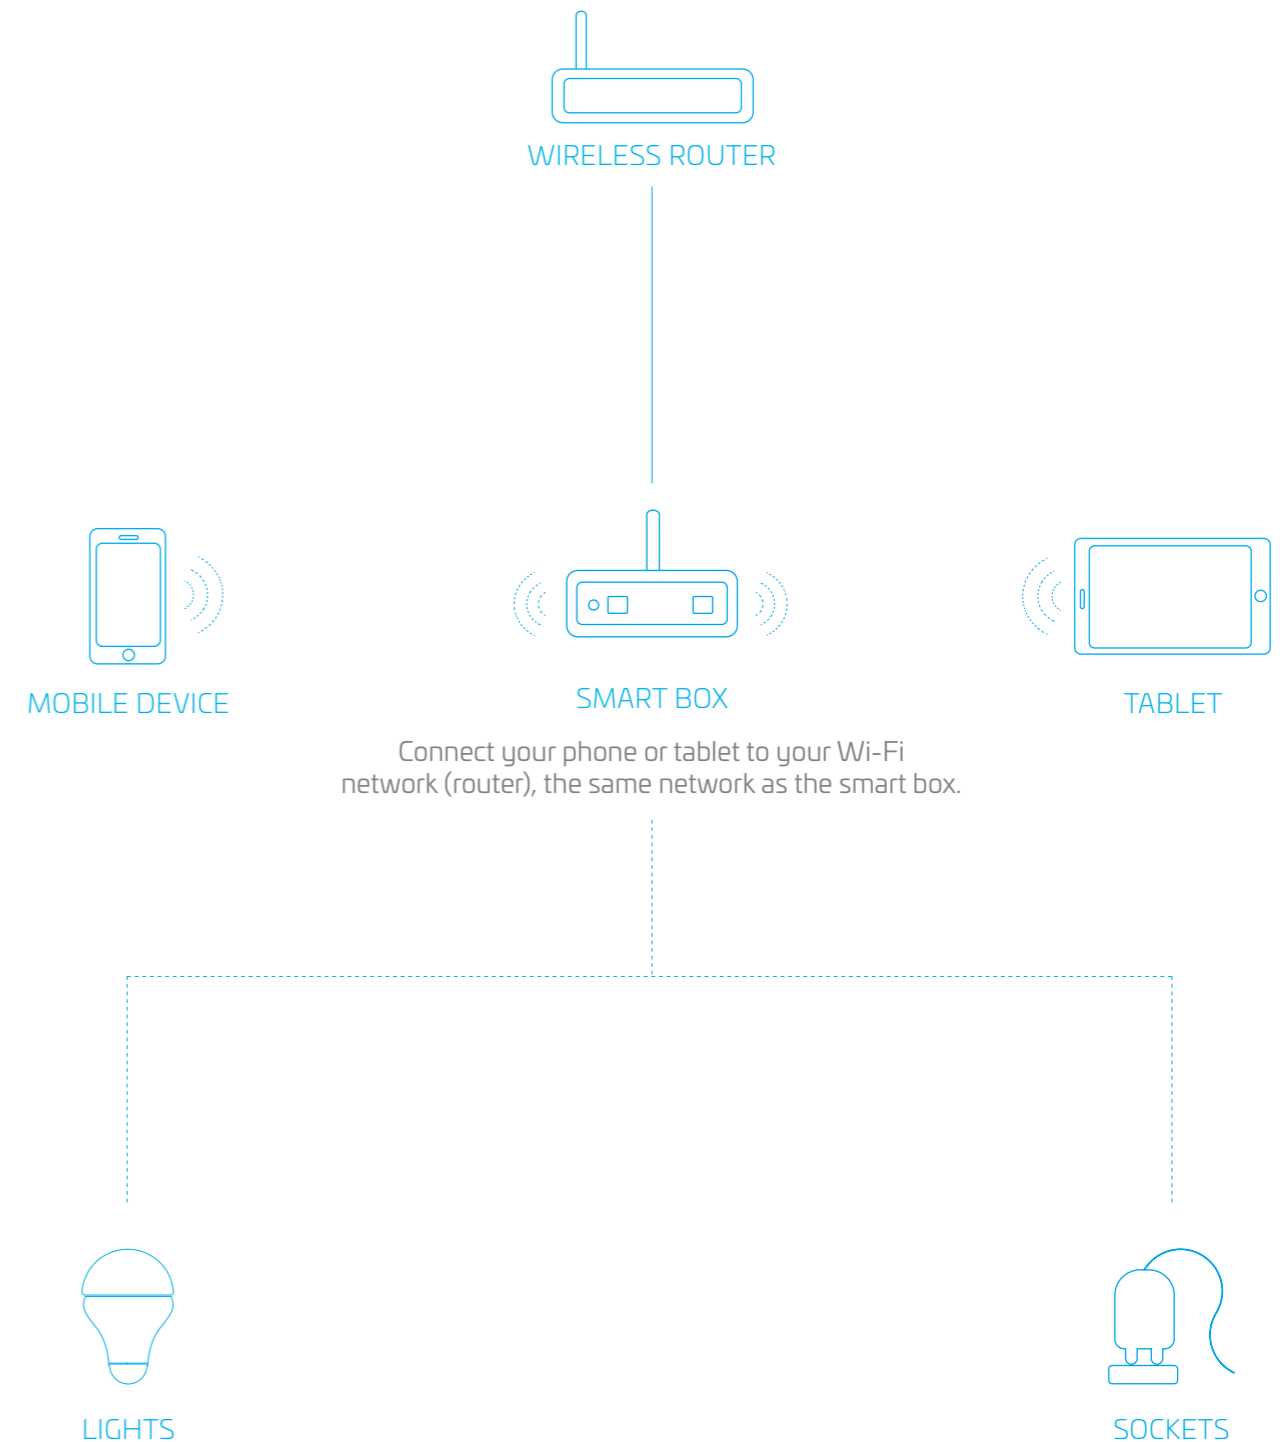

SMART DEVICE

You can either use your mobile device or tablet to control click smart around the house.

How it Works

Plug the Smart Box into a wireless router using the Ethernet cable supplied

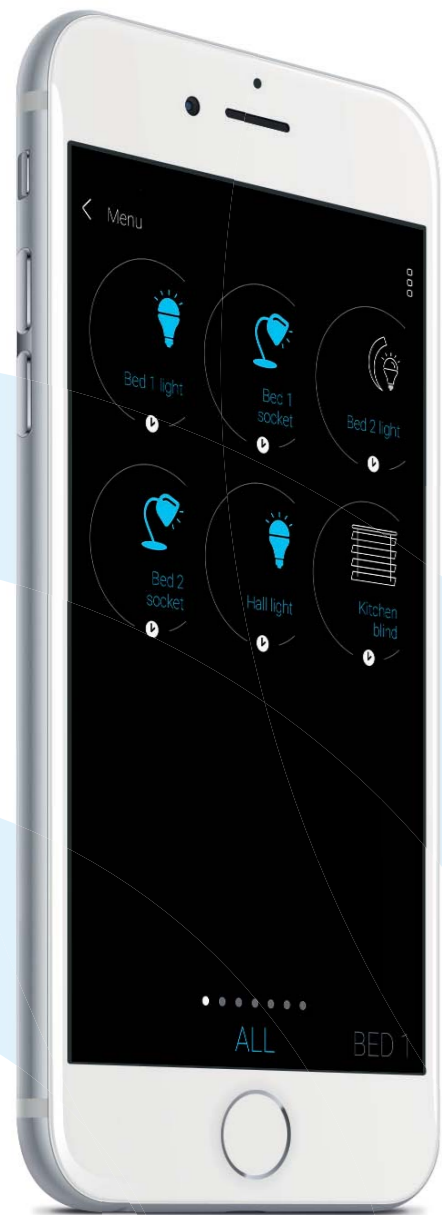

Connect your phone or tablet to your Wi-Fi network (router), the same network as the smart box.

Once you have downloaded the click smart app and gone through the set up guide you can now control your lights, sockets and blinds.

Multiple Rooms

Multiple rooms can be controlled through the smart box by multiple users. You only need one device to use the smart box, but you can enable up to 40 receivers to be controlled by up to eight paired phones or tablets meaning multiple users can use the system to control their environment.

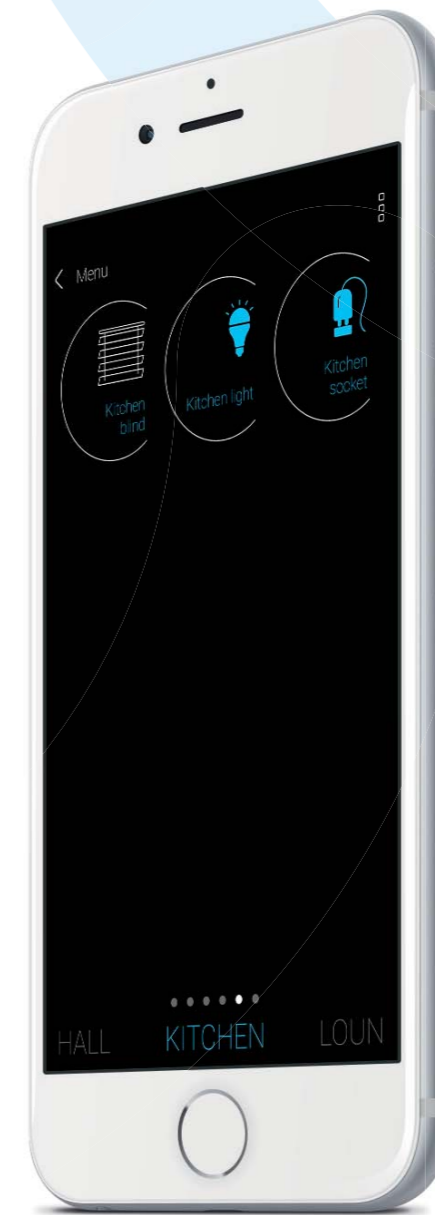

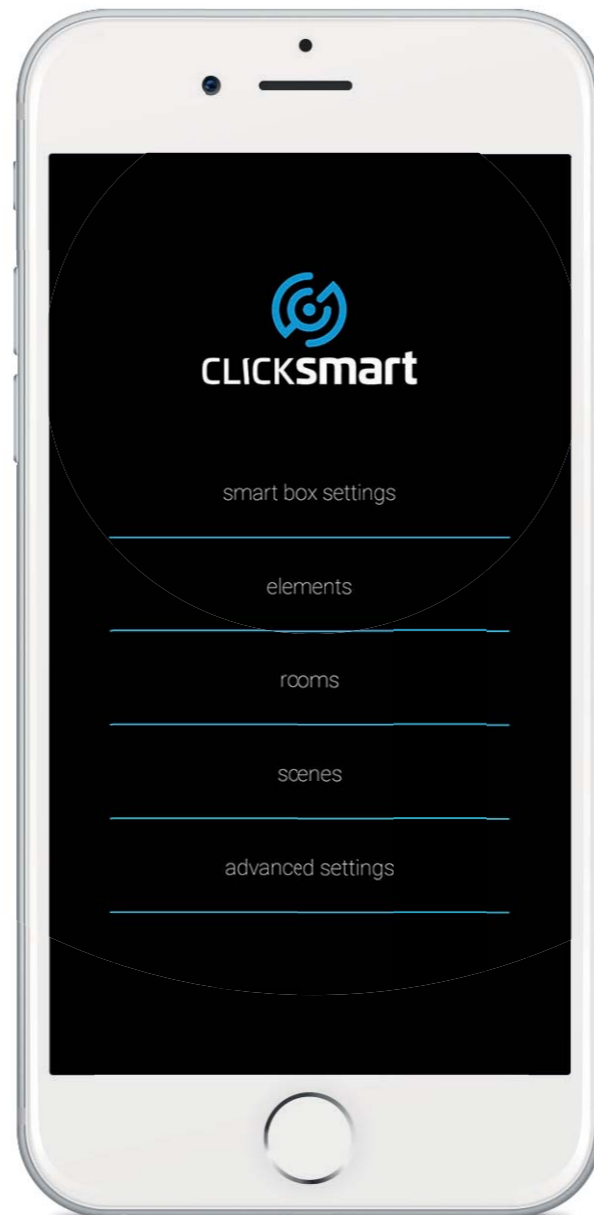

When the Smart device is connected to the same Wi-Fi as the smart box, full manual control is available. The end user controls switches and small power as required.

One Device

You only need one device to use the smart box, but you can enable up to 40 receivers to be controlled by up to eight paired phones or tablets meaning multiple users can use the system to control their home.

When the Smart device is connected to the same Wi-Fi as the smart box, full manual control is available. The end user controls switches and small power as required.

Features of the Click Smart app...

Schedules

Create schedules for timed automatic control.

Scenes

Scenes bring together multiple receivers within a single control.

Multiple Users

Multiple users can control the application at any time.

The benefits of Smart Box...

1 Smart Box

All information is stored on the Smart Box.

8 Devices

Up to 8 smart phones or tablets can control each receiver.

40 Receivers

Each Smart Box can enable up to 40 receivers.

0 Controllers

No need to buy multiple controllers.

A few ways the Smart box can help you

Turn the lights on from the comfort of your sofa or create a lighting scene.

Turn the en suite light on before getting up, to go to the bathroom.

Turn the kids bedroom lights off if they leave them on at any time.

Turn the garden lights on without going outside.

Turn over to see more scenarios..

1. Add an additional switch to an existing light without the need for any cabling.

Occasionally you may find yourself waking in the middle of the night.

It's difficult to see in the dark and you may want to avoid disturbing people.

Make your home smarter with the Click Smart RFWB-20/G and RFSAI-61B.

Just fit the RFSAI-61B into the light you wish to activate.

And then add the RFWB-20/G switch to a convenient place.

You can now easily turn the bathroom light on from the comfort of your bed.

2. Fix flickering by using a retractive switch instead of a rotary dimmer (wired).

When you switch on one of your lights with a rotary dimmer do you experience continuous flickering?

Even when the lights on, the flickering has continued.

Dealing with constant flickering can be very frustrating for you.

Make your home smarter with the RFDEL-71B and a retractive switch.

Replace the wired rotary dimmer with the retractive switch and add the RFDEL-71B to the light fitting.

This will now stop any flickering that may have occurred.

3. Two-way dimming control from separate locations (wired).

If you have a 2 way switch upstairs and a dimmer downstairs you can turn the light on from the switch.

Once dimmed with the rotary dimmer, there is no way for you to increase the brightness.

You can only switch the lights on and off at the same brightness.

This means you have to walk downstairs which can be a hazard if the lighting is set at a low level.

Make your home smarter with a RFDEL-71B and two retractive switches.

This will allow you to dim from both locations, meaning no more risky trips down the stairs in the dark.

4. Adding a switch to an outdoor socket for multiple appliances

There's always something to do around the house, no matter what time it is.

It's sometimes difficult to see in the dark and you never know what you are walking in to.

Make your home smarter with the Click Smart RFWB-20G and RFSAI-61B.

Simply add the RFSAI-61B to the socket you wish to control.

And then add the RFWB-20/G switch to the convenient place.

By adding a smart switch you can now control anything plugged into the socket.

Affordable Control for Everyone

Available for Multiple Locations

SECURITY

SIMULATED OCCUPANCY

Control of lighting (both internal and external) to create simulated occupancy

Leave lighting to turn off automatically when you leave for work

Have lighting, as well as audio devices such as radio's switch on and off during holidays to give your home that lived in appearance

OUTDOOR LIGHTING

Automatically switch on lights via presence detectors

Additional switching for multiple use (all the family can have a key fob to put external lights on as they approach the home)

Providing complete control via simple solutions

ENERGY SAVING

LIGHTING

Automatically turn off lighting and power when you want to.

Central programmer enables you to programme lighting and power seven days a week

Last man out function – not sure if the upstairs lights are still on?

Easily remedied by a master switch inside the front door to turn everything off when you leave and back on when you return

EXTERNAL POWER

Providing switching for external power so that sockets on the outside of buildings are only powered when you want to use them

Automatically switch on/off Christmas lighting so that it is only on when you want it to be

COMFORT

LIFE'S LITTLE LUXURIES

Creating scenes to provide added ambience for any situation around the home

Control children's rooms to restrict use of TV / gaming etc.

Provide timed access routes to create scenes such as "morning" or "bedtime"

ASSISTED LIVING

Provides flexibility to change an installation to meet changing requirements of the occupier

Use a bell push to switch a light on for the hard of hearing

Create a bedtime route that turns all lights on and off to allow the occupier to get to bed without needing to switch lights on/off

CONTROL

IN THE HOME

Change the use of a room – putting switches where you want them. Ideal for converting a downstairs room into a bedroom

IN THE OFFICE

Switches can be mounted on any surface – even glass

IN THE GARDEN

Wireless switching up to 200 metres

IN BUSINESS

Interacts with building management systems to provide additional control

COMMUNAL AREAS

Walkway lighting (hotels and commercial properties with interconnecting buildings)
